

Software solution for the calculation of thermal stresses in glass due to solar radiation

Features:

-  Estimation of risk for thermal fracture according to NF DTU 39
-  Consideration of arbitrary climate data for arbitrary locations
-  Calculation of arbitrary disc structures
-  Graphical evaluation by off colours
-  Machining on the edge of the glass
-  Calculate silkscreen glass
-  Different bearing
-  partial shading
-  etc...

The software
for your success!!
